Introduction

The instructions are designed to guide you step-by-step through the process of installing a printer available on business.link space in a macOS environment.

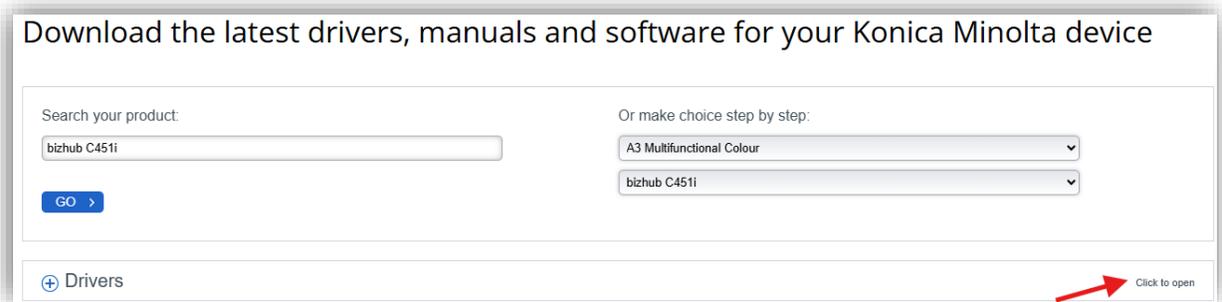

Driver download

Search for **bizhub C451i** driver available on manufacturer's [website](#).

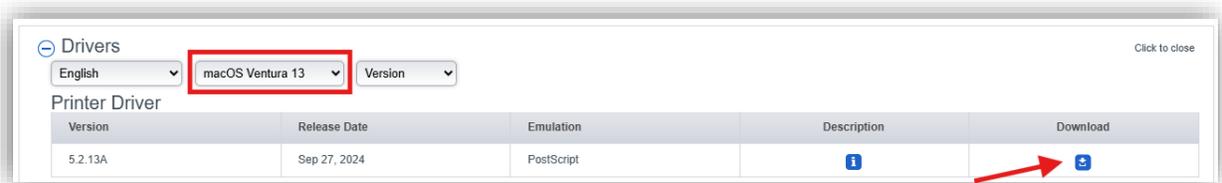

<https://www.konicaminolta.co.uk/en-gb/customer-support/download-centre>

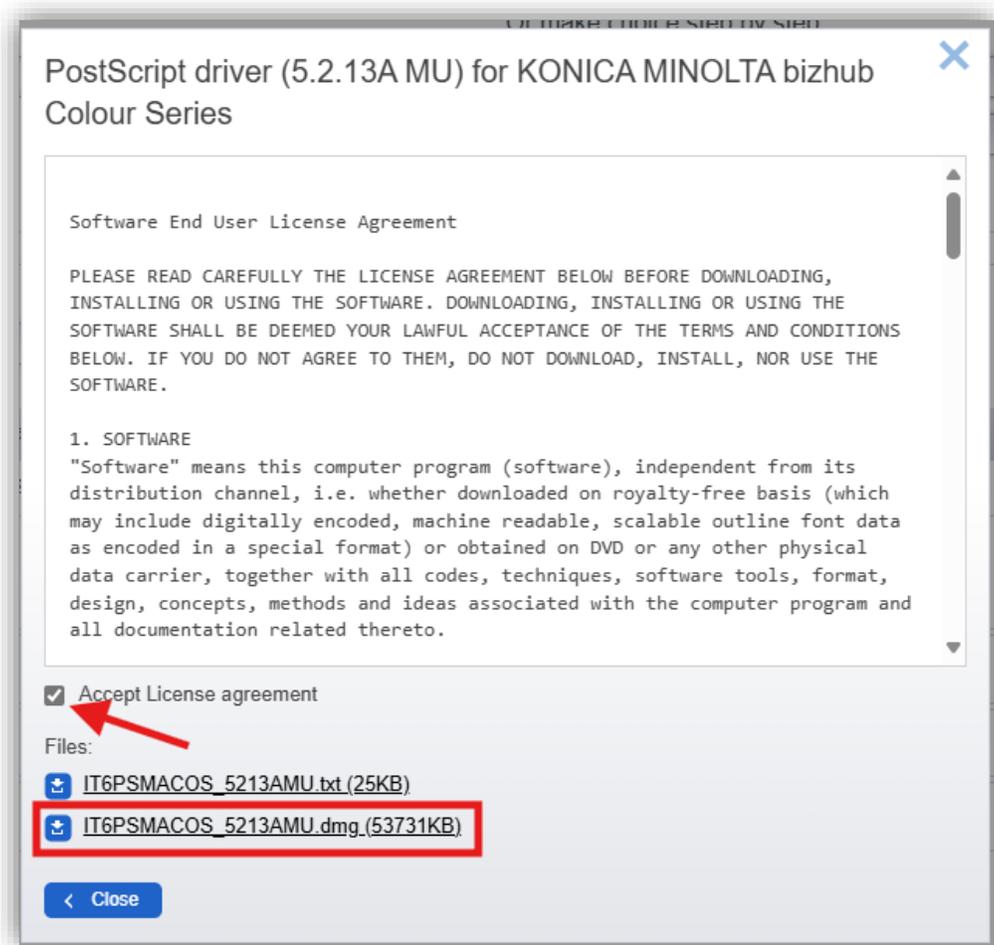

Expand the **Drivers** list by clicking on the + icon or on **Click to open**.

Set the filter for the version of your macOS software and then click on the icon to download the latest version of the available driver.

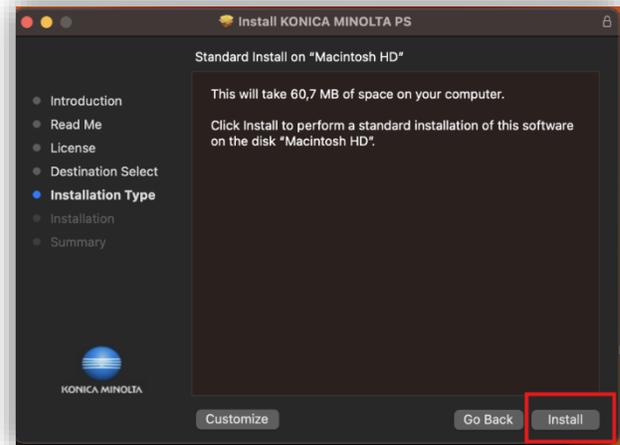

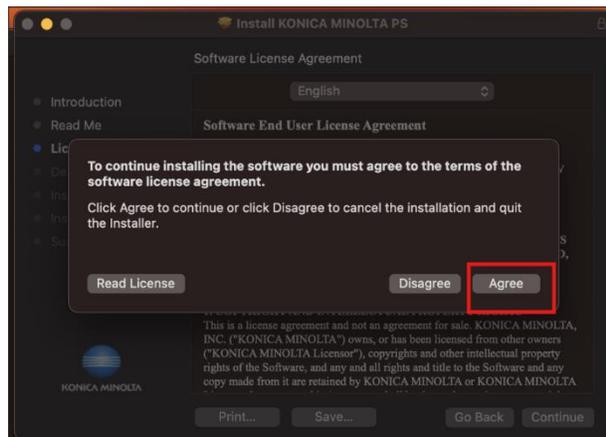

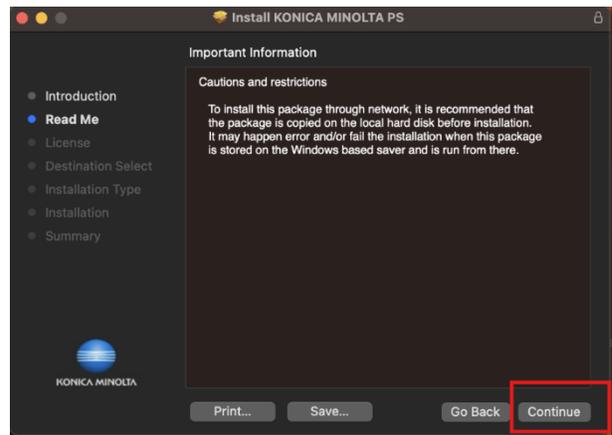

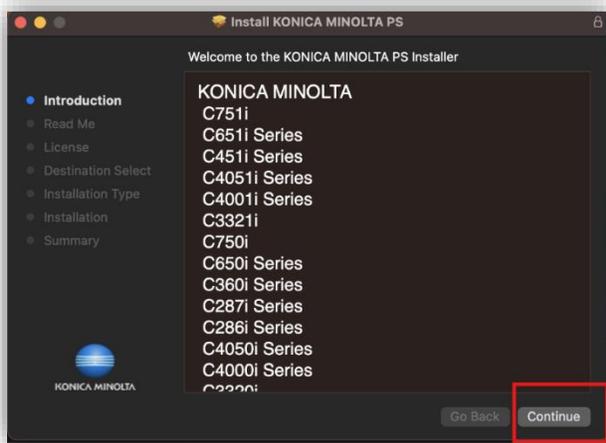

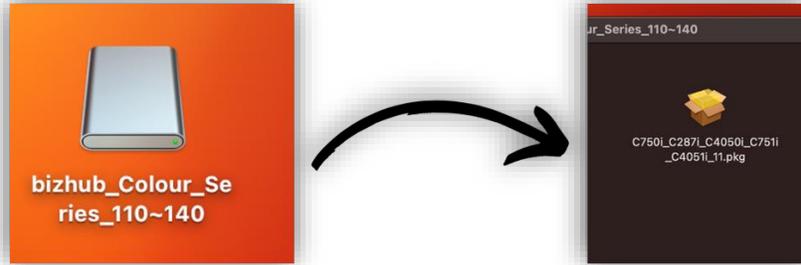

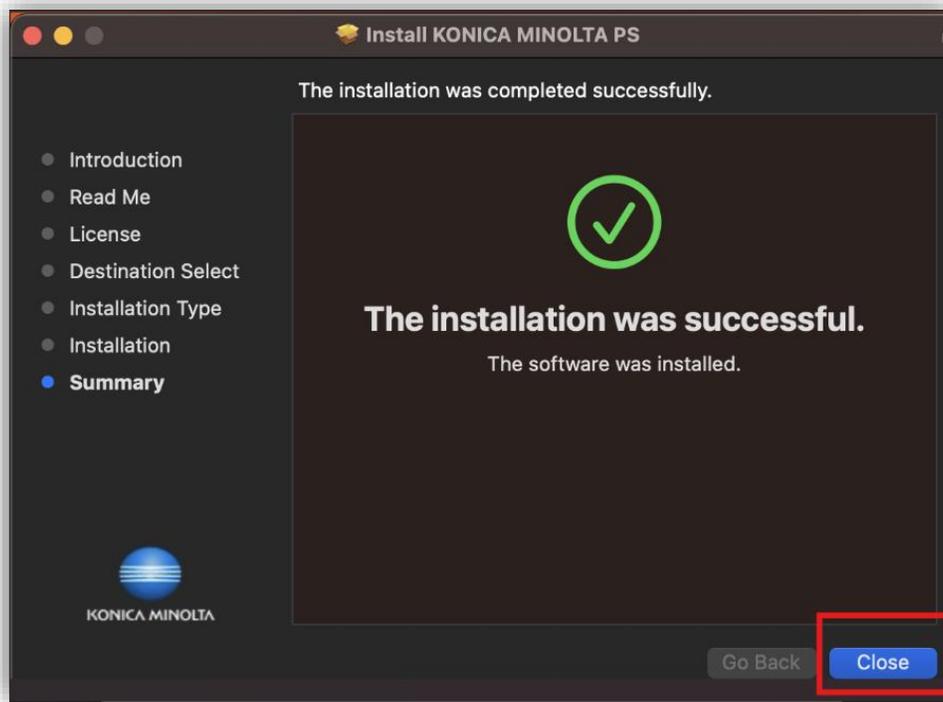

In the next step, accept the license agreement so that the .dmg file can be downloaded.

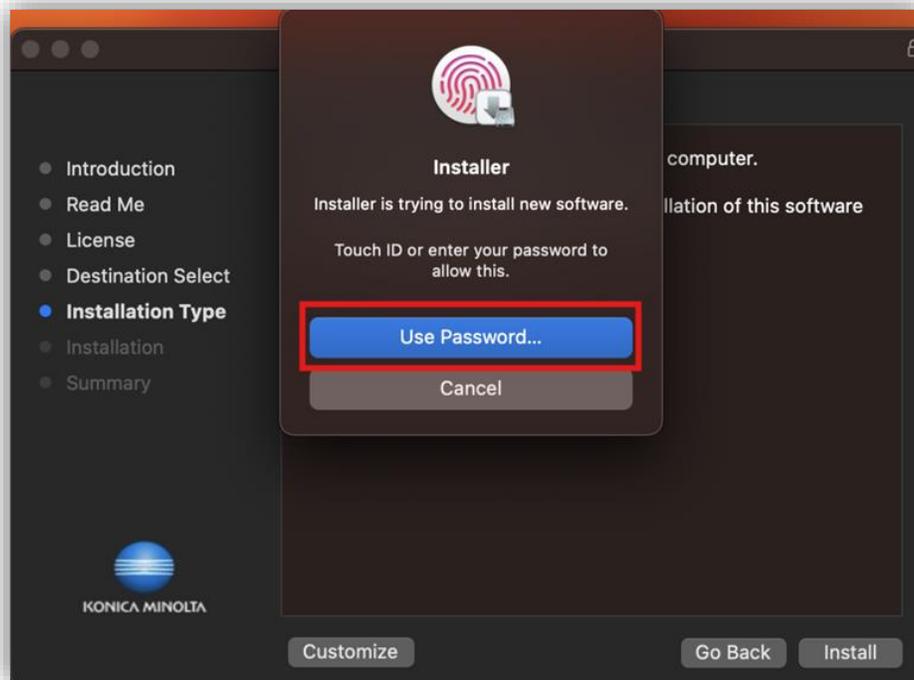

Installation

Unzip the downloaded driver and go through the next screens of the installer.

The installer will ask you to authorize the installation via Touch ID or user login and password.

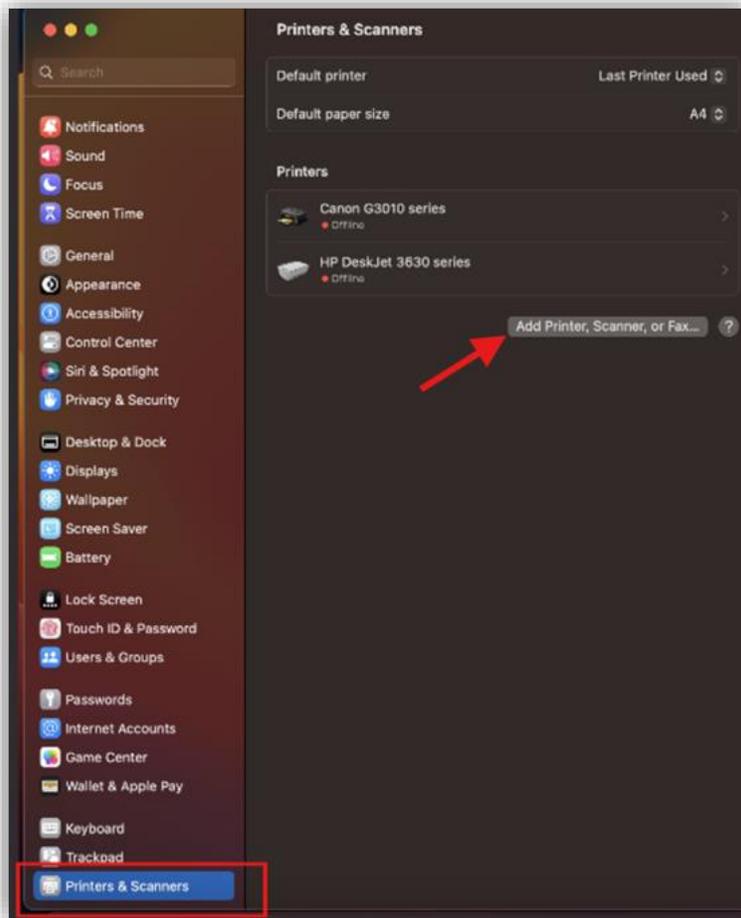

Adding a printer

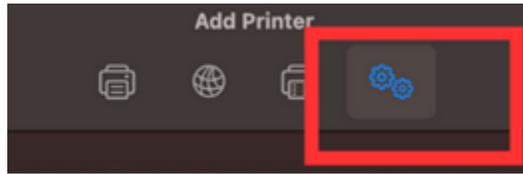

To add a new printer, open **System Settings** by selecting the Apple icon.

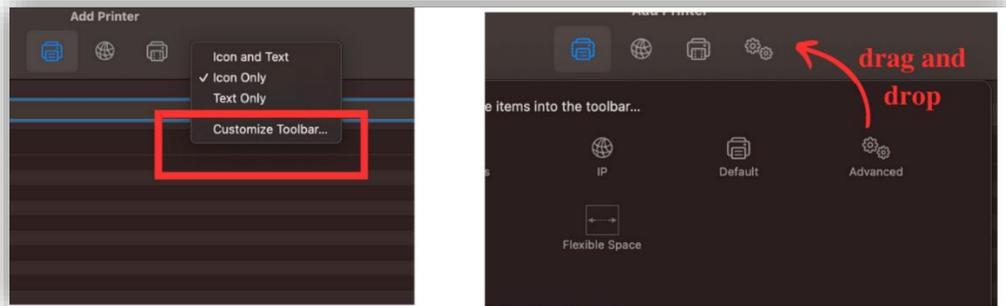

In the system settings, select **Printers & Scanners** and then **Add Printer, Scanner or Fax...**

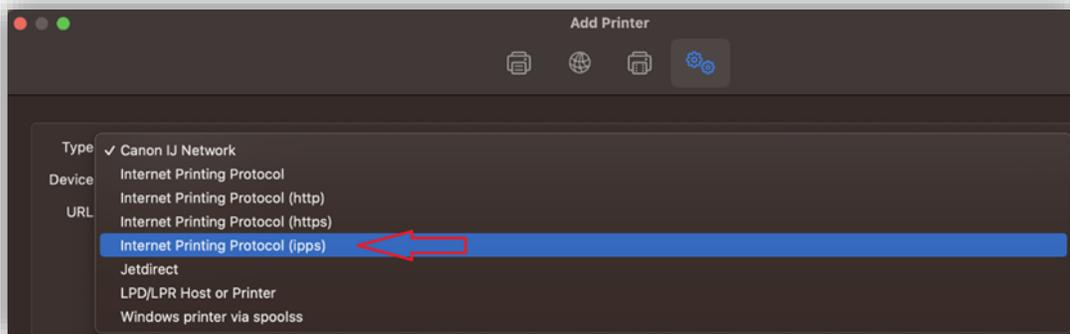

When a new window appears, select the **Advanced** tab.

If you don't have it, right-click on the top bar and select **Customize Toolbar...** then drag and drop the **Advanced** icon to the top bar.

In the window that opens, select **Type: Internet Printing Protocol (ipp)**

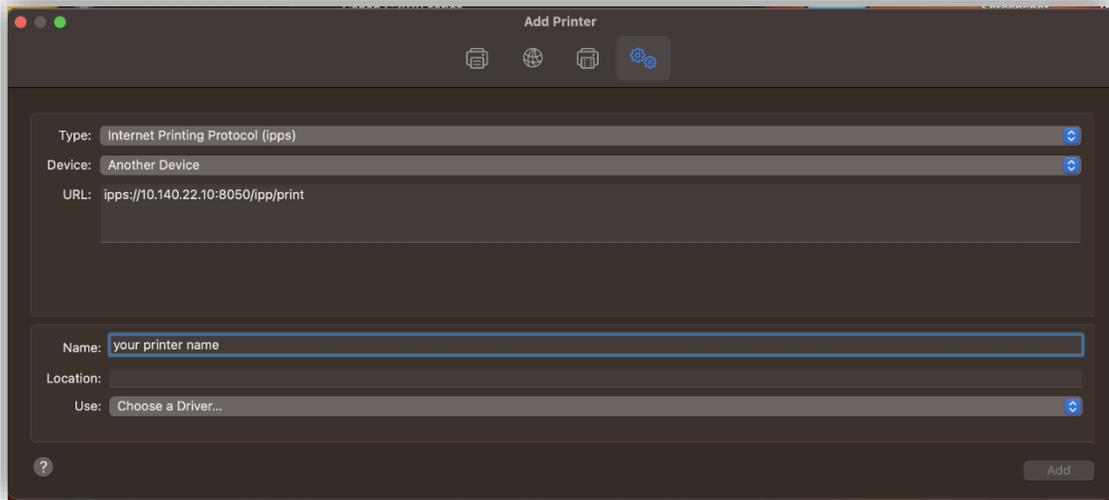

Then fill in the following data:

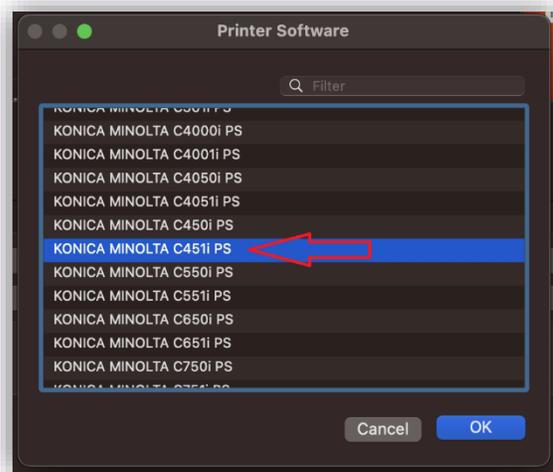

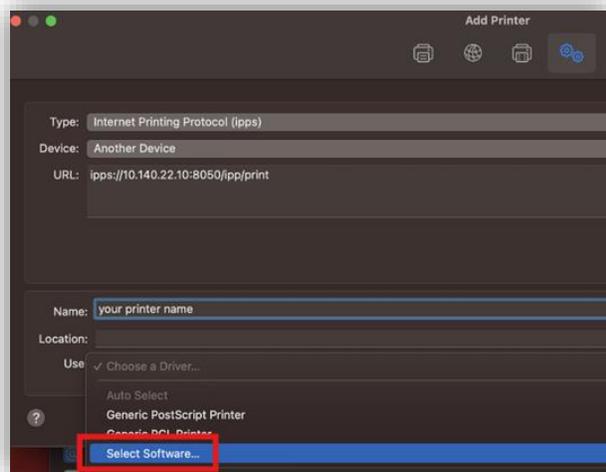

Devices: Another Devices

URL: ipps://10.140.22.10:8050/ipp/print

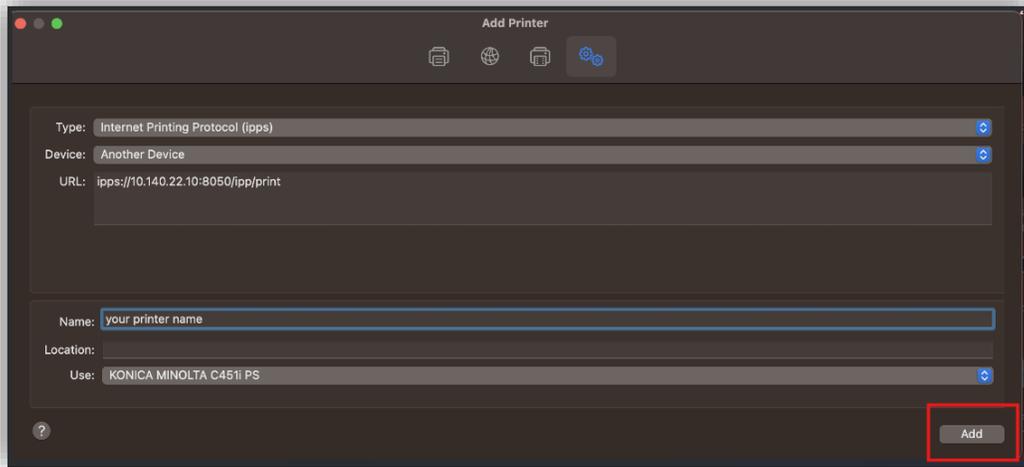

Name: *enter your own printer name*

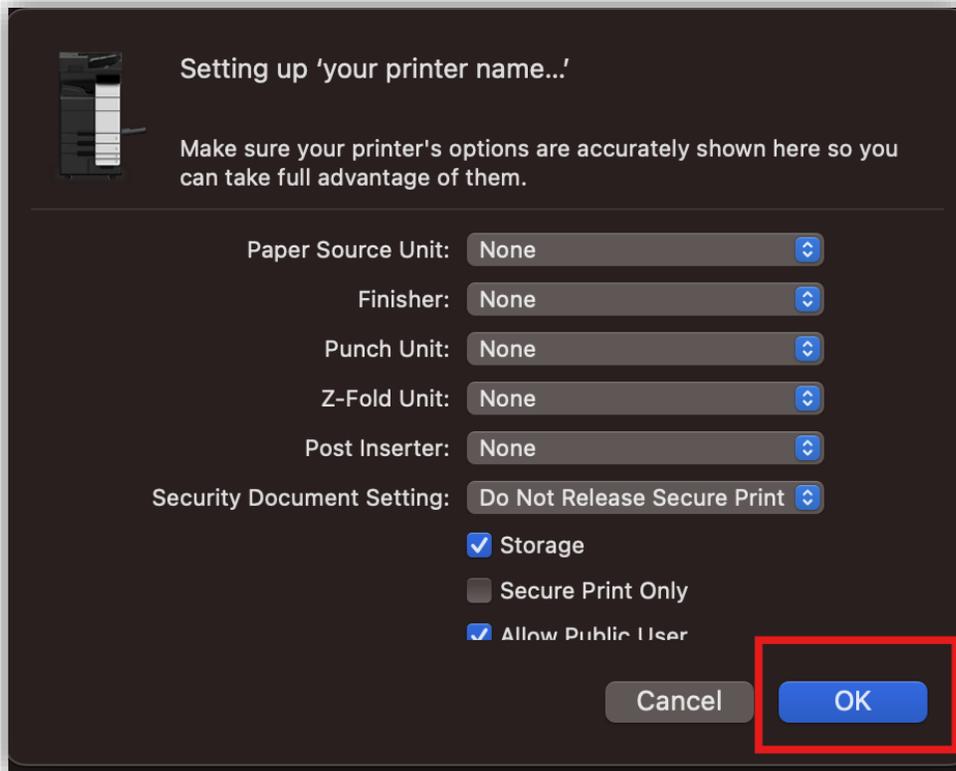

In the **Use** line, select the software that was previously installed.

The stage is completed by selecting the value **Add**.

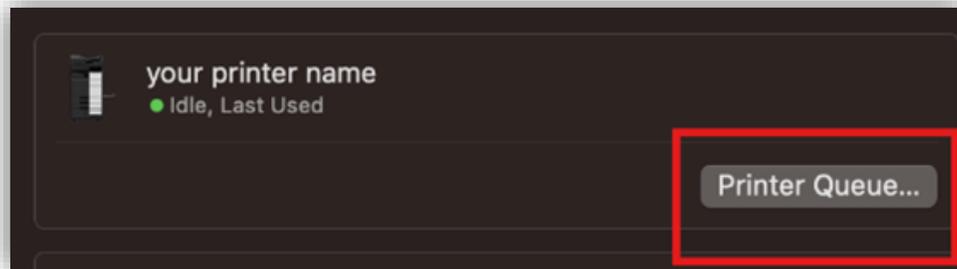

The following printer configuration remains unchanged.

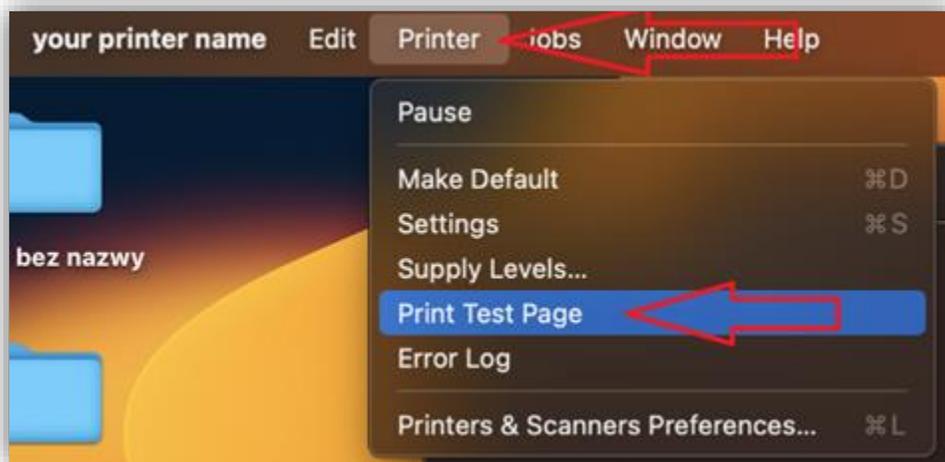

Printing test - authorization

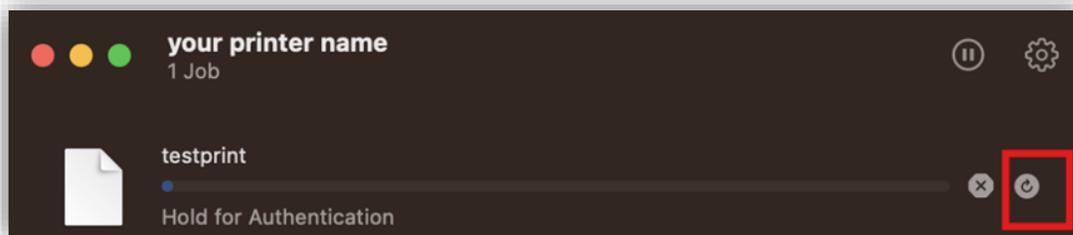

Select the added printer and double-click on it, then select **Printer Queue...**

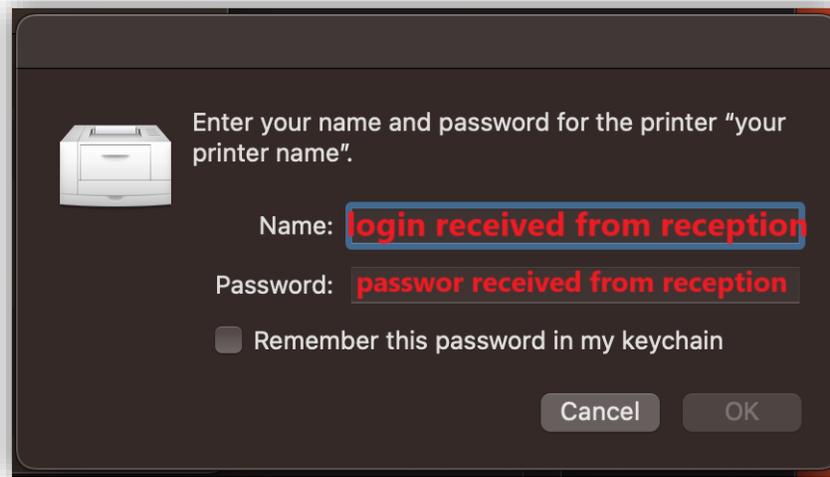

Click in the top bar on the **Printer** button then select **Print Test Page**

Since the printer does not yet have credentials saved (your login and password received from the BusinessLink front desk) the print job will be stopped - the message "Suspend for authentication". Click the button to renew the print job.

Enter the login and password provided by your local Customer Care team.

By default, your login used to log into the computer will be entered.

The printer has been installed and the test page sent to the printing system.

Walk up to any business.link printer, apply your access card, and then delete the test page print job - we don't want to charge you for this print.
